

GEORGIA AGRICULTURAL FACTS

S1855-1-U

Georgia Agricultural Statistics Service
1989 Edition

Unlike many commodities which can only be produced in specific areas of Georgia, cattle can be found in all 159 counties of the state. In fact, cattle and calf production rank third in Georgia's agricultural sector in terms of cash receipts, contributing \$280 million to the state's economy in 1988.

We extend a special thanks to the farmers, agribusinessmen, County Extension Officials and others who voluntarily provided basic data used to prepare the statistics presented in this publication.

MESSAGE FROM THE COMMISSIONER

Dear Fellow Georgians:

Agriculture is an everchanging field constantly influenced by numerous outside forces such as new technology, the economy, the weather and other entities beyond the farmer's control. Because of the nature of this industry, the farmer, and those who depend on the fruits of his labor, must have some barometer to measure the success or failure of these efforts.

The Georgia Agricultural Statistics Service, in cooperation with the Georgia Department of Agriculture, accomplishes this mission by monitoring, recording and reporting the activities in the State's agricultural sector.

Georgia Agricultural Facts is designed as a reference guide for farmers and agribusiness professionals, as well as communicators, students, teachers, economists, public officials and other decision-makers who rely on accurate agricultural data. The information compiled in this annual publication provides documentation of our State's agricultural heritage along with its ongoing progress. By reviewing the data contained in its pages, we can easily review both the years of plenty and years of drought in the course of minutes.

Despite the uncertainty of agriculture from year to year, the enclosed figures attest that Georgia farmers remain productive and that our agriculture most certainly remains a viable part of our State's economy.

Published by the Georgia Department of Agriculture under a cooperative agreement with the National Agricultural Statistics Service and the United States Department of Agriculture, **Georgia Agricultural Facts** is dedicated to the continued growth and success of Georgia's agricultural industry and to the efforts of our farmers, who sustain us with their labors and continue to inspire us with their perseverance.

Sincerely,

A handwritten signature in dark ink, which appears to read "Tommy Ivin". The signature is fluid and cursive.

Tommy Ivin
Commissioner,
Georgia Department of Agriculture

FOREWORD

Throughout this 1989 edition of Georgia Agricultural Facts you'll find facts and information on almost all facets of our State's agricultural industry. Most of these data were made possible by the voluntary cooperation of farmers, agribusinessmen and others involved in Georgia's basic industry. Without their cooperation, completing thousands of questionnaires on the hundreds of surveys conducted each year, this annual reference guide would not be possible. We want to express our sincere appreciation to every individual who contributed to this effort.

Unfavorable climatic and economic conditions for most of the 1980's resulted in trying times for many of the State's farmers and agribusinesses. During this period, the number of farms in Georgia declined from 59,000 in 1979 to 48,000 in 1988—a loss of 11,000 farms. Land in farms also showed a dramatic decrease of 13 percent.

There are, however, many facts throughout this book indicating that 1988 may be the year that began an upward trend. On page 74, farm cash receipts in 1988 were up from the 1987 receipts for all major crops. Total crop cash receipts were the largest since 1985, reflecting better prices, larger acreages and improved yields in many instances.

Increases in both broiler production and prices received pushed receipts to an all time high. Milk production also showed improvement after several declining years. All commodity cash receipts, at \$3.5 billion, were the highest since 1984 and total cash income even exceeded the 1984 level.

Total farm assets at the end of 1988 were 9 percent above a year earlier and farm debt fell 5 percent during the year. The debt to assets ratio at 19.1 percent was the lowest in the past 10 years. At the end of 1988, farmers' equity surpassed \$14 billion for the first time since 1981.

The 1980's brought many perils which probably changed the face of Georgia's agriculture forever. But, perhaps, due to the perseverance and ingenuity of both farmers and service entities, a strong foundation is being built for the 1990's. A foundation that, hopefully, will lead to new heights in accomplishment for Georgia's basic industry.

Sincerely,

A handwritten signature in cursive script, appearing to read "Larry E. Snipes".

Larry E. Snipes
State Statistician

FIELD CROPS

HIGHLIGHTS - 1988 CROP YEAR

Despite a statewide drought in the spring and early summer of 1988, yields per acre were higher for most Georgia crops than in 1987. Corn, cotton, and sorghum were the only crops with yields below those of 1987.

Planting and growing conditions in early 1988 were generally favorable until the beginning of May when the weather turned dry. The drought continued until mid-July. Scattered showers in July became more frequent and conditions began to improve. Many farmers were able to resume soybean planting which had been suspended because of the dry soils. The showers came too late, however, for much of the corn and cotton. In addition to the drought, cotton was severely infested with beet armyworms. Thirty five thousand acres were plowed up or completely abandoned.

Although Georgia's rainfall for 1988 was below normal for the fifth consecutive year, many major producing areas received near normal precipitation from August through November. This late summer moisture improved soybean and hay yields, but also contributed to "boll rot" and "boll lock" in cotton.

A bright spot in the 1988 crop picture was the small grains. The dry weather of May and June was nearly ideal for small grain production and harvest. Wheat yield per acre tied the record high and oats and rye set new record high yields.

PEANUT ACREAGE AND YIELD UP

Georgia's peanut yield in 1988 averaged 2,630 pounds per acre, up 130 pounds from the 1987 yield. This compares with the record yield of 3,375 pounds per acre in 1984. Acreage harvested totaled 685 thousand acres, 56 thousand acres, or 9 percent, more than the 630 thousand acres harvested in 1987. Peanut production in Georgia amounted to 1.80 billion pounds, 14 percent more than 1987. This production increase followed 2 consecutive years of declines. Georgia accounted for 45 percent of the total U.S. peanut production in 1988. The value of the peanut crop produced in Georgia totaled \$479 million, 6 percent more than the value of the 1987 crop. The preliminary marketing year average price was 26.6 cents per pound. This does not include payments from any 1988 GFA pool profits.

CORN ACREAGE, YIELD AND PRODUCTION DROPS

Corn suffered more than any other crop from the dry conditions of May and June. Average yield fell to 62 bushels per acre in 1988, down 22 bushels from 1987's yield. Acreage planted also fell to a new record low of 600 thousand acres, 12 percent less than 1987. Acreage harvested for grain totaled 500 thousand acres and 50 thousand acres were cut for silage. A higher proportion of the acreage harvested for grain was irrigated, minimizing somewhat, the effect of the drought. Irrigated corn harvested for grain totaled 160 thousand acres and averaged 118 bushels per acre. Dryland corn averaged less than 36 bushels per acre from 340 thousand acres harvested. Corn silage yielded 8.5 tons per acre, 2.0 tons less than in 1987.

Corn production in 1988 totaled 31 million bushels, 40 percent less than 1987 and the smallest corn crop since 1977. The average price farmers received was \$3.05 per bushel for the 1988 crop, 80 cents per bushel above 1987's price. Total value of grain produced amounted to \$94.6 million for 1988, compared with \$115 million in 1987.

COTTON ACREAGE AND PRODUCTION UP

Georgia's cotton acreage planted in 1988 jumped to 350 thousand acres, 40 percent more than the 250 thousand acres planted in

1987. Because of the drought and heavy infestation of beet armyworms only 315 thousand acres were harvested. This was still 70 thousand acres more than harvested in 1987. Growers in the extreme southern part of the State had more favorable growing conditions and acreage abandoned in that area was much less. Statewide, yield per harvested acre averaged 584 pounds of lint, down 98 pounds per acre from 1987. Production totaled 370 thousand bales, 9 percent more than the 338 thousand bales produced in 1987. Cotton prices declined in 1988 to 54.3 cents per pound. This was 7.5 cents per pound less than the 1987 average price. Value of production totaled \$96.4 million, 4 percent less than the \$100 million crop of 1987.

SOYBEAN YIELD AND PRODUCTION UP

Soybeans recovered from a very slow start to average the highest yield in six years. Rains during August and September pushed Georgia's 1988 soybean yield to 25 bushels per acre. This was 5 bushels per acre above 1987 and the highest yield since 27 bushels in 1982. Late plantings in June and July boosted acreage to 930 thousand acres, up 12 percent from a year earlier. This was the first acreage increase in four years. Acres harvested climbed 15 percent from 1987 to 900 thousand acres, the first increase since 1982. Because of the higher yields and increased harvested acreage, production soared to 22.5 million bushels, 44 percent above 1987. Soybean prices were also well above the previous year, averaging \$7.40 per bushel. This was \$1.79 per bushel above 1987 and the highest marketing year average price since 1983. The value of production of soybeans in 1988 amounted to \$167 million, nearly twice the value of the 1987 crop. With this large increase, soybeans replaced tobacco as the second most valuable crop in Georgia in 1988.

TOBACCO ACREAGE UP

Georgia's tobacco acreage in 1988 jumped 19 percent from 1987 to 38 thousand acres harvested, the highest since 1984. Yields improved slightly from the previous year to average 2,260 pounds per acre, 5 pounds more than 1987's yield. This resulted in total production of 85.9 million pounds, also 19 percent above 1987. Marketing year prices averaged \$182.70 per hundred pounds, fractionally less than in 1987. Value of production totaled nearly \$140 million, 19 percent above the \$118 million crop of 1987.

WHEAT YIELD TIES RECORD

Wheat yield in 1988 averaged 43 bushels per acre, equaling the record high of 1981. Dry weather during May decreased the incidence of diseases and provided excellent harvest conditions. Acreage harvested for grain totaled 500 thousand acres, 9 percent above 1987's harvested acreage of 460 thousand acres. Grain production amounted to 21.5 million bushels in 1988, 51 percent more than 1987. Wheat prices averaged \$3.20 per bushel for 1988, 74 cents per bushel above 1987. The value of the wheat crop amounted to \$68.8 million, almost double the value of the 1987 crop.

Oats and rye each set record yields in 1988, averaging 63 and 27 bushels, respectively. Oat production totaled 2.84 million bushels, 72 percent greater than in 1987. Rye production was up 23 percent from the previous year at 1.89 million bushels. Prices increased to \$1.80 per bushel for oats and \$2.60 per bushel for rye.

HAY PRODUCTION DECLINES

Dry weather in the spring reduced hay yields, but a wet fall allowed farmers an additional late cutting. For the year, hay yields averaged 2.2 tons per acre, the same as in 1987. Acreage harvested totaled 570 thousand acres, 5 percent less than a year earlier. Hay prices averaged \$63.00 per ton, up \$1.00 from 1987.

Million dollars

FRUITS, NUTS, AND VEGETABLES

HIGHLIGHTS - 1988 CROP YEAR

Georgia's fruit and nut crops produced mixed reviews in 1988. Peaches escaped most freeze damage and responded with the best crop since 1984. Pecan, apple and grape production were all below 1987. Prices received surpassed the 1987 level for each crop and grapes sold at a record high price.

January was much colder than normal. Above average precipitation during January helped to replenish seriously depleted soil moisture supplies. A lack of rain and continued cool weather during February and much of March delayed the peach and apple bloom, but the cool temperatures did provide adequate chill hours for peaches. Apple and peach development lagged until rains and warmer weather during April spurred progress ahead of the five year average. Peach and apple harvests ran behind normal most of the season. The late season apple harvest moved very rapidly and harvest was completed ahead of average. The pecan harvest also started slow and trailed average progress for the season.

Fresh market tomatoes recorded a record high value of production due to strong prices and a record high yield. Sweetpotato value of production was the third highest of record.

PECANS

Total production for Georgia's 1988 pecan crop was 110 million pounds. This was a 4 percent drop from the 1987 crop and 8 percent below the 1986 crop. Diseases and insects were not serious problems in 1988 as in some past years. Some growers opted to reduce the number of sprayings thus reducing input cost. Dry weather for May through July reduced nut size and weight of the 1988 pecan crop. Georgia's share of the national crop fell from 44 percent in 1987 to 36 percent in 1988. Harvest was slow getting started and lagged behind the 5 year average for the entire season.

The average pecan price received by Georgia farmers was 59.9 cents per pound. This was an increase of 5.9 cents over the 1987 price of 54.0 cents per pound but still far below the record high 68.4 cents set in 1985. The value of the 1988 production, at \$65.9 million, was up 5 percent from 1987. However, the value was still 20 percent less than 1986's record high value of \$81.8 million.

PEACHES

Georgia's 1988 peach crop was the best since 1984 and tied 1981 as the second largest crop for the decade of the 1980's. Heat and dry weather caused some sizing problems, but production was still 29 percent above 1987. Total production was 140 million pounds and utilized production was 132.0 million pounds.

Peach trees were slow to bloom until temperatures warmed to above normal levels at the end of March and early April. Rains the last half of April aided sizing. Dry

weather and below normal temperatures returned for most of May slowing development. Harvest started slowly and ran behind normal most of the season. Harvest was completed during the last week in August.

The average price received was 20.1 cents per pound, up 2.0 cents from the 1987 price of 18.1 cents per pound. The 1988 value of production jumped to \$26.5 million. This was an increase of 49 percent over 1987's value of production.

APPLES

Georgia's total utilized production for 1988 was 32 million pounds. This was a 20 percent drop from the 40 million pounds utilized in 1987. The dry spring and summer reduced sizing but did not have as much effect on apples as was originally feared. Light freeze and scattered hail damage in north Georgia caused some early season losses.

The average price per pound was 13.1 cents or 1.2 cents higher than last year's price and the second highest of record. The value of Georgia's 1988 utilized production at \$4.20 million was 7 percent below 1987.

GRAPES

Georgia's 1988 total grape production, at 2,500 tons, fell 7 percent from 1987's 2,700 tons. The utilized production for 1988 also totaled 2,500 tons. The warm and very dry late spring and early summer aided growers in controlling diseases and enhanced quality of the grapes. Average price jumped to a record high \$911 per ton, a 5 percent increase over 1987's \$870 per ton. The value of the utilized production fell 3 percent from 1987 to \$2.28 million in 1988.

TOMATOES

In 1988, Georgia farmers planted 3,000 acres of tomatoes and harvested 2,900 acres, the same as in 1987. However, the yield in 1988, at 180 cwt. per acre, was considerably above the 110 cwt. per acre obtained in 1987. Production in 1988 totaled 522,000 cwt. compared to 319,000 cwt. in 1987. The price received for tomatoes fell in 1988 to \$22.30 per cwt., a drop of \$2.90 per cwt. from 1987. The total value of production in 1988 was \$11.6 million, \$3.6 million more than the \$8.04 million earned in 1987 and the highest on records back to 1929.

SWEETPOTATOES

In 1988, 5,200 acres of sweetpotatoes were harvested, the same as in 1987. However, average yield increased in 1988 by 10 cwt. to 160 cwt. per acre. Production in 1988 was 832,000 cwt., 7 percent more than the 1987 production. The average price received in 1988 was \$15.00 per cwt. This was 18 percent more than the price received in 1987 but still well short of the record high \$16.40 per cwt. received in 1983. The value of production in 1988 was \$12.5 million compared to \$9.91 million in 1987.

GEORGIA

BROILERS - Number, Pounds, and Value of Production, Georgia, 1980-1988

EGG PRODUCTION AND VALUE - Hatching, Table, and Total Eggs, Georgia, 1980-1988

POULTRY

1988 Farm Value of Poultry and Eggs

\$1,340,700,000

Second in Poultry Value of Production

Second in Broiler Production

Fifth in Egg Production

HIGHLIGHTS-1988

The total farm value of poultry and eggs produced in Georgia amounted to \$1.34 billion for the 1988 production year, up 19 percent from 1987. Value of production from broilers totaled \$1.1 billion, up 28 percent from 1987. The value of production for all eggs was \$230.4 million, down 10 percent from 1987. The value of production for turkeys increased 34 percent to \$29.7 million in 1988.

BROILER PRODUCTION

Georgia broiler producers produced 772.8 million broilers in 1988 for the sixth consecutive year of record high numbers. Production increased 5 percent from the 733.4 million broilers produced in 1987. Pounds produced in 1988 totaled 3.40 billion, an 8 percent increase from 1987's 3.15 billion pounds. The average price received per pound for broilers in 1988 was 31.5 cents per pound. This is 5.0 cents more than last year. Georgia ranked second to Arkansas in the number of broilers produced and accounted for 15 percent of the Nation's total broiler production in 1988.

EGG PRODUCTION

Eggs produced in Georgia for the year ending November 30, 1988, totaled 4.29 billion, 4 percent less than the 4.48 billion eggs in 1987, and 1 percent less than the 4.32 billion eggs in 1986. The number of layers averaged 17.8 million in 1988, 3 percent less than the 18.4 million layers the previous year. In hatching egg flocks, the average number of layers was down slightly in 1988, to 5.87 million from 5.90 million in 1987. The average number of layers in table egg flocks was 11.9

million in 1988. All layers in Georgia produced an average of 241 eggs per hen in 1988, 2 eggs less than the 243 eggs in 1987. Hatching egg flocks produced 1.31 billion eggs during 1988, slightly more than the previous year. Table egg flocks produced 2.98 billion eggs in 1988, 6 percent less than 1987. The average price for all eggs in 1988 was 64.4 cents per dozen, 4.0 cents per dozen less than 1987. Table egg prices averaged 40.9 cents per dozen, down 3.1 cents from the previous year. Hatching egg prices averaged 124.0 cents per dozen, down 9.7 cents per dozen from 1987. Georgia's total egg production was 69 percent table eggs and 31 percent hatching eggs. Georgia ranked third in the Nation in 1988 in the average number of layers and fifth in total egg production. California was the leading state in layers and egg production followed by Indiana. Pennsylvania and Ohio were third and fourth, respectively, in egg production. Georgia ranked second in value of eggs produced behind California in 1988.

TURKEY PRODUCTION

Turkeys produced in Georgia during 1988 totaled 2.40 million birds, down 1 percent from 1987. Pounds of turkey produced in 1988 totaled 70.8 million compared with 67.4 million pounds produced in 1987. This is a 5 percent increase from the 1987 poundage. Only heavy breed turkeys are produced in Georgia. The average price received per pound was 27 percent more than 1987 and averaged 42.0 cents.

CATTLE AND CALVES - Georgia, January 1, 1980-1989

HOGS AND PIGS - Georgia, December 1, 1980-1988

LIVESTOCK AND DAIRY

HIGHLIGHTS - 1988

Georgia's cattle inventory continued to decline during 1988. All cattle and calves on January 1, 1989 totaled 1,500,000 head, down 1 percent from a year ago and the lowest inventory since 1961 when only 1,481,000 head were on farms. Prices during 1988 were up sharply from 1987, and averaged \$6.70 per cwt. higher for cattle and \$11.70 higher per cwt. for calves. Net returns to hog producers fell sharply in 1988, a result of both higher feed cost and lower hog prices. The 1988 marketing year average for all hogs of \$41.50 per cwt. was \$10.80 lower than in 1987.

Georgia ranked 24th nationally in the number of cattle and calves on farms on January 1, 1989, and 13th in the number of hogs and pigs on December 1, 1988. The number of cattle operations in Georgia during 1988 totaled 33,000 head, 1,000 less than in 1987. Hog operations numbered 9,100 in 1988, 500 more than during 1987.

Despite sharply higher feed costs, milk production during 1988 showed substantial strength by posting a 6 percent rise from a year earlier. Georgia ranked 27th in the Nation in pounds of milk produced. The number of operations and farms with milk cows in 1988 totaled 1,700, unchanged from 1987.

Cash receipts from marketing of dairy and livestock products totaled \$666.3 million during 1988, 5 percent below 1987. Higher prices for cattle, calves and milk were not enough to offset the decrease in cattle and calves marketings and lower hog prices.

CATTLE

All cattle and calves on Georgia farms on January 1, 1989, totaled 1,500,000 head, 1 percent less than the previous year's total of 1,520,000. The number of beef cows decreased 3,000 head to 700,000, but milk cow numbers increased 2,000 head to 104,000. Cash receipts from the sale of cattle and calves in 1988 fell 4 percent to \$280.3 million. The average price received for cattle was up 13 percent to \$57.80 per cwt. Calves averaged \$83.40 per cwt., 16 percent more than in 1987.

The inventory value for all cattle and calves on January 1, 1989, totaled \$765.0 million, up 13 percent from a year earlier. Average value per head at \$510 compared with the \$445 per head value on January 1, 1988.

The 1988 calf crop totaled 710,000 head, 3 percent less than the previous year. Jackson County captured the lead in number of cattle and calves with 29,000 head on January 1, 1989. Morgan County followed with 27,000 head and Wilkes County was third with 26,000 head.

HOGS

There were 1,210,000 hogs and pigs on Georgia farms on December 1, 1988, up 3 percent from the previous year. Breeding inventory increased 3 percent to 165,000 head. Hog cash receipts, at \$178.3 million for 1988, were down from \$211.6 million for 1987. The average value of hogs and pigs on hand December 1, 1988, was \$57.00 per head, down \$7.00 from the previous year. The total value of Georgia's hog inventory on December 1, 1988, totaled \$69.0 million compared with \$75.8 million a year earlier.

Georgia pork producers had 261,000 sows to farrow from December 1, 1987 through November 1988. This was up 9 percent from the 240,000 sows that farrowed during the same twelve months a year earlier. The average number of pigs saved per litter in 1988 was 7.48, resulting in a pig crop of 1.95 million. The pig crop was up 8 percent from the previous year. Colquitt County led all counties in the number of hogs and pigs on farms with 85,000 head followed by Coffee County with 53,000 head.

MILK PRODUCTION

Georgia's 1988 milk production increased 6 percent to 1.24 billion pounds. The average number of milk cows rose 5 percent to 104,000 head. The annual production per cow at 11,875 pounds increased 1 percent from 1987. Cash receipts from marketing totaled \$175.9 million in 1988, 8 percent more than the previous year. Milk prices averaged \$14.30 per cwt. in 1988 compared with \$14.20 per cwt. in 1987. Putnam County was the leading county in number of milk cows on January 1, 1989 with 9,800 head followed by Morgan County with 9,300 head.

RED MEAT PRODUCTION

Red meat production in Georgia during 1988 totaled 313 million pounds, down 24 percent from 1987. Production includes beef, veal, pork, lamb and mutton slaughtered in commercial establishments. The number of hogs slaughtered in Georgia during 1988 totaled 1,195,700, 29 percent less than in 1987. Hogs slaughtered averaged 240 pounds per head in 1988 compared with 237 in 1987. Cattle slaughter totaled 203,400 head in 1988, 17 percent less than in 1987. Liveweight of cattle butchered in 1988 averaged 924 pounds compared with 914 pounds in 1987. Calves slaughtered in 1988 numbered 15,800 head, up 108 percent from the previous year. There were 1,000 head of sheep and lambs slaughtered in 1988, unchanged from 1987.

FARM CASH RECEIPTS - Distribution, Georgia, 1988

FARM PRODUCTION EXPENSES - Georgia, 1988

FARM INCOME AND EXPENSES

1988 HIGHLIGHTS

Georgia farmers' cash income for 1988 rose 10 percent to \$3.9 billion despite a late spring through early summer drought. The increase was due to stronger prices for most crops and larger crops as well as strong prices and increased volume of broilers. Receipts from farm marketing rose \$420.5 million or 13 percent and other farm income excluding government payments rose \$5.2 million or 3 percent.

Georgia farmers' gross farm income for 1988 rose 9 percent to \$4.1 billion. Gross farm income includes non-cash income and inventory adjustments. Value of farm inventories fell \$18.5 million in 1988 compared to an increase of \$2 million in 1987. Farm production expenses rose 7 percent in 1988 to \$2.74 billion. Net farm income for 1988 was a record high \$1.37 billion, up 13 percent from 1987.

1988 CASH RECEIPTS

Georgia farm products sold during 1988 including government payments and farm forest products generated cash receipts of \$3.81 billion, 10 percent more than the \$3.46 billion for 1987. Crops accounted for 40.3 percent of total, up from 37.6 percent in 1987. Poultry accounted for 35.3 percent of the total and livestock and livestock products sales accounted for 17.5 percent.

Crop cash receipts totaled \$1.53 billion in 1988, up 18 percent from 1987. Peanut receipts valued at \$486 million accounted for 12.8 percent of the total cash receipts. Soybean receipts, at \$154 million jumped 94 percent from 1987 and accounted for 4.1 percent of the total cash receipts. Tobacco cash receipts, at \$140 million, were up 20 percent and corn cash receipts rose 35 percent.

Poultry cash receipts in 1988 totaled a record high \$1.34 billion, up 19 percent from 1987. Broiler sales at \$1.07 billion or 28.1 percent of the total again ranked as the leading commodity for gross sales in Georgia.

Eggs are still in fourth place among all commodities with cash receipts of \$230 million, but down 10 percent from 1987.

Livestock cash receipts in 1988 totaled \$666 million, down 5 percent from 1987. Cattle and calves receipts valued at \$280 million, were down 4 percent from 1987. Hog receipts at \$178 million fell 16 percent from 1987. Dairy product sales at \$176 million were up 7 percent from 1987.

Farm forest products and government payments at \$88 and \$174 million, respectively, accounted for 6.9 percent of the total.

1988 FARM PRODUCTION EXPENDITURES

Farm production expenditures totaled \$2.74 billion for Georgia in 1988, up 7 percent from the \$2.56 billion in 1987. Expenditures were higher for all major categories except livestock and poultry purchases and interest. Outlay for livestock and poultry purchased showed the largest decrease, down 19 percent from 1987. Interest expenditures were 3 percent below a year earlier.

Feed, the largest 1988 expenditure category at \$721.8 million accounted for 26 percent of Georgia production expenses. This level was 24 percent above 1987.

Expenditures for other major items above 1987 were seed at \$62.6 million, up 4 percent; fertilizer and lime, \$148.9 million, up 20 percent; pesticides \$122.9 million, up 3 percent; fuel and oil \$90.6 million, up 2 percent; electricity \$38.6 million, up 8 percent; capital consumption \$307.9 million, up 3 percent; wages \$191.6 million, up 4 percent. Business taxes at \$73.7 million were 2 percent above last year while repair and maintenance expenses at \$127.8 million were 8 percent above 1987 and other miscellaneous expenses at \$269.9 million were 4 percent above last year.

GEORGIA

PRECIPITATION - Percent of Normal by Month and Annual Average, Georgia, 1988

Percent of normal

TEMPERATURE - Percent of Normal by Month and Annual Average, Georgia, 1988

Percent of normal

GENERAL

WEATHER AND CROP HIGHLIGHTS - 1988

Georgia soils were dry at the beginning of 1988 resulting from below normal rainfall for each month during the last half of 1987. Topsoil moisture was slightly replenished in January as cold temperatures were accompanied by above normal rainfall. Field activities were delayed for much of January. A drier February allowed land preparation and early corn planting to take place in the south. There was an adequate number of chill hours received during the winter and peach trees came into bloom in March. Weather conditions in March encouraged early planting and other field work. Rainfall was above normal in April and helped maintain adequate soil moisture levels. Farmers proceeded as normal in the planting of row crops and vegetables. Dry periods in May aided in the planting of peanuts and cotton.

Soil moisture became critically short in June due to below normal rainfall. The limited supply of moisture put stress on pastures, hay and row crops. Small grain and hay harvesting operations made good progress in June. Ample amounts of rain fell in some parts of Georgia in July, but it did not alleviate the overall soil moisture deficit. Hay crops and pastures showed slight improvements from the July showers. Pest control became a major concern to many cotton growers. August brought significant amounts of rain which left soil moisture adequate at most locations. Peach harvest was completed during this period. September had plenty of rain which was beneficial to hay, pastures and late maturing row crops. Harvesting operations made good progress during the last week of the month and continued to do so in October. Above normal temperatures in November allowed good progress in the seeding of small grains and winter pastures. Normal temperatures and below normal rainfall in December aided late season row crops and pecan harvest.

JANUARY

January was colder than usual in 1988. The average temperature for the State was 41.0 degrees and normal for the month is 45.5 degrees. Low temperatures were in the single digits and teens in the northern part of the State while a low of around 20 degrees was recorded in central and southern areas. A low of one degree was recorded at Clayton on the 11th. Temperatures reached as high as 70 degrees in the north and 80 degrees in the south. The State averaged 5.17 inches of precipitation which was .52 inch above normal for this period. Soil moisture was slightly replenished, but the rainfall did not make up for the deficit present at the beginning of the year. Soil

temperatures remained low delaying early land preparation. The harvesting of 1987 crop cotton, soybeans and pecans was completed during the month. Temperatures significantly colder than normal during the second week of January brought snow and caused some cold stress on livestock and poultry.

FEBRUARY

Temperatures remained below normal in February dipping into the single digits in some areas with Blairsville recording a low of 2 degrees on the 7th. Elsewhere, lows ranged from the low teens in the mountains to the upper teens and lower 20s in the central and southern parts of the State. High temperatures were in the upper 60s to mid 70s in the north and mid 70s to lower 80s in the south. Statewide average for this period was 46.4 degrees, down 1.7 degrees from normal. Precipitation across the State was below normal as well with an average of 3.85 inches received. Normal rainfall is 4.53 inches for February. The southern part of the State, however, received above normal precipitation that was mostly due to heavy showers that fell during the third week. Dry weather in the south during the last week of February allowed for land preparation, early corn planting and other field work to continue. Chill hour requirements for peaches were generally met during the month.

MARCH

Average temperature for March was normal at 55.1 degrees, but rainfall was 2.26 inches below the normal 5.57 inches. Temperatures in the northern third of the State ranged from the high teens to the low 80s. The temperatures in the rest of the State ranged from the mid 20s to the high 80s. Soil moisture supplies at the end of the month were mostly adequate in the southern half of the State and mostly short in the northern half. Rain totals January 1 through March 31 were 5 to 6 inches below normal in the north, 1 to 2 inches below normal in the central regions, and 2 to 5 inches above normal in the south.

Farmers made good progress in land preparation and early planting of spring crops. Corn planting was very active toward the end of March and progressed ahead of the 1987 crop. Peach bloom was later than both the previous year and normal. Freeze damage was very minimal and most of the crop was in good condition.

APRIL

April brought much needed rain to the State. Precipitation averaged 4.94 inches which was .74 of an

inch more than normal. The rain helped maintain adequate amounts of soil moisture. Temperature for April averaged 63.4 degrees, only .2 degree below normal. Sharply above normal temperatures occurred the first one-third of the month. The lowest readings were in the 30s in the north and central regions and in the upper 30s to the lower 40s in the southern region. Highs in the upper 80s to the low 90s were reached statewide. Rainfall January 1 through April 30 was 5 to 10 inches below normal in the north, 1 to 4 inches below normal in the central regions, and 2 to 5 inches above normal in the south.

Some farmers were forced to retransplant tobacco and replant watermelons that were damaged early in the month by high winds and blowing sand. The peach crop had all reached or passed the blooming stage by the 10th of April. The apple crop was in bloom or past bloom by the third week of April and was in mostly good condition. Condition ratings for most crops were fair to mostly good at the end of the month. Progress was near normal for most crops with the exception of cotton and peanut plantings which were well behind average at the end of the month. Timely rains the last half of April provided a boost to the wheat crop. Cattle and hogs remained in mostly good condition all month long.

MAY

May was below normal for both precipitation and temperature. Rainfall for the month was 2.62 inches below the normal 4.34 inches. Soil moisture ranged from adequate to short at mid-May but was short to very short at the end of the month. Rains on the 24th and 25th slightly improved soil moisture, but it was rapidly lost as dry weather with high evaporation occurred during the last week of May. Year to date rainfall deficits by the end of May were 10 to 15 inches in the northern third of Georgia but parts of the south had received above normal amounts. Average temperature for the month was 68.5 degrees which was 2.2 degrees below normal. The coldest temperatures were mostly in the 40s. Extreme highs ranged from the mid 80s in the mountains to the low and mid 90s elsewhere. A high temperature of 100 degrees was recorded at Camilla on the 31st.

Soil moisture supplies declined during May and by the end of the month were critically short. The dry weather was ideal for small grain and hay harvest. Planting of crops such as peanuts and cotton progressed well but was slowed by dry soils at the end of the month. During the last week of May, hail damaged some tobacco fields and peach orchards. Insect infestations were building in cotton and peanuts at the end of the month.

JUNE

The month began with falling soil moisture

supplies and crop conditions and the downward trend continued through most of the month. Scattered showers interrupted the pattern but only temporarily. Average temperature for June was 76.5 degrees which was .2 degree less than normal. Highs ranged from the mid 90s in the north to just over 100 degrees in the south. Lows ranged from the mid 40s in the mountains to the high 50s in the far south. Precipitation was 44 percent of normal with an average of 1.91 inches. Year to date rain deficit at the end of June was 15 to 2.0 inches in the north, 5 to 10 inches in the central areas, and less than 5 inches in the south.

Low soil moisture during June put stress pastures, hay and row crops causing crop condition ratings to plummet. Corn was in the critical pollination and filling stages and suffered the most. Pasture feed supplies became a major concern in north Georgia as many farmers used the first cutting of hay as supplemental feed. However, the dry weather was favorable for harvesting the State's small grain crops. Tobacco and wheat harvest progress was about normal at the end of the month and peach harvest was about a week behind normal. Crop development was also slower than normal. Insects caused problems in cotton, peanuts, and soybeans. Scattered thunderstorms at the very end of June slightly improved soil moisture levels.

JULY

Scattered thunderstorms in July provided ample amounts of rainfall for some locations. Rain was recorded on 10 to 15 days over the south and in the mountains but less than 10 days in other areas. Soil moisture levels were improved during July but some areas remained dry. Precipitation averaged 1.45 inches below the normal 5.34 inches. Temperatures were once again near normal for the period with an average of 79.2 degrees. The State average is 79.4 degrees. Low temperatures ranged from the 50s to the mid 60s. High temperatures ranged from the mid 90s to slightly over 100 degrees. A high of 103 degrees was reached in Calhoun on the 10th and in Jesup on the 18th.

The rain that did fall improved the conditions of pasture and hay crops from the low levels of the end of June but condition ratings were still low. The showers also provided enough soil moisture to complete the planting of soybeans and sorghum. Cotton condition ratings declined due to increased pressure from insects. Budworms, bollworms and aphids were the most commonly mentioned insects. Corn harvest got off to a slow start the last part of the month. Tobacco harvest progress was behind last year and average at the end of the month. Peach harvest ran well behind normal most of the month. Apple harvest got off to a very slow start at mid-month and was about two weeks later than normal at the end of the month. Hot weather management of poultry and livestock was a major concern to operators in mid-July.

AUGUST

Soil moisture levels in August increased slightly due to above normal rainfall. Precipitation in August was .34 inch above the normal 4.43 inches. The moisture continued to help hay and pasture crops. Average temperature was also above normal by 1.3 degrees. The state average is 80.3 degrees. Temperatures ranged from a low of 50 degrees to a high of 99 degrees.

Scattered showers provided some relief for crops, with soybean and hay crops showing the most improvement. Cotton prospects continued to decline as pressure from beet armyworms and aphids increased. Beet armyworms and aphids caused most of the damage. Beet armyworms were also reported in some soybean and peanut fields. Dry soybean fields in some areas began to wilt and drop pods. Peach harvest was complete by the third week of August and the apple harvest pace quickened considerably. Corn harvest ran behind normal all month and by the end of August was about a week later than average. Peanut harvest got off to a slower than normal start at the end of the month. Cattle and hogs were in mostly good condition.

SEPTEMBER

Pastures, hay crops and late maturing row crops benefitted from significant rains that fell across Georgia during the first two weeks of September. The rains boosted the average rainfall by 2.15 inches over the normal 4.15 inches and ranked September as the wettest month of the year. Although the rains helped build soil moisture reserves, it did slow down the early harvesting of row crops. Temperatures remained near normal at an average of 74.0 degrees. Temperature extremes ranged from the upper 80s to mid 90s for highs to the upper 40s to lower 60s for lows. Harvest of corn and hay was delayed by the rains as were most field activities. The rain improved pecan and soybean conditions but boll rot began to increase in cotton. Peanut farmers had a difficult time with the weather as peanut digging fell more than a week behind normal. Cotton harvest was also limited as most of the cotton was picked from drought and insect damaged fields. Apple harvest was well behind normal and wheat seeding was slightly behind normal at the end of the month.

OCTOBER

October was cool with near normal rainfall. Temperatures began declining rapidly as Blairsville recorded freezing temperatures on the 8th and 9th. The rest of the State also had cold temperatures as Waycross recorded a low of 30 degrees on the 14th. Average temperature for the month was 59.7 degrees, 4.1 degrees below normal. Rainfall was up .2 of an inch from the normal 2.6 inches.

Early October rain helped soil moisture supplies but further damaged the cotton crop by increasing boll rot. At the beginning of October, cotton harvest and peanut digging were a week behind normal. Dry weather the rest of the month allowed harvesting to catch up to normal. The cool temperatures however, slowed maturity of peanuts, cotton, and late soybeans. The early frost caused little damage, but some late planted sorghum and soybeans in north Georgia were affected. Pecan harvest at the end of the month was ahead of 1987, but slightly behind average. Cotton harvest was a little over one-half complete by the end of the month, moderately behind average. Soybean harvest was a little over one-fourth complete, also moderately behind average. Peanut harvest was over 90 percent complete at month's end, nearly equal to average. Apple harvest was complete around mid-month and pecan harvest was slightly behind average at the end of the month.

NOVEMBER

Temperatures were slightly warmer than usual in November. The State's average temperature was 56.4 degrees, 2.1 degrees above normal. Maximum temperatures reached the mid 70s in the north and the mid 80s in the rest of the State. Minimum temperatures reached the mid 20s in the north and lower 30s in other locations. Precipitation was also above normal as 3.19 inches of rain fell. The normal average rainfall for November is 2.98 inches. Seeding of small grains and winter grazing crops was aided by the improved soil moisture supplies during the month. Late season harvesting of soybeans, cotton and grain sorghum made good progress, and at the end of the month was near normal. Pecan harvest was near 60 percent complete but moderately behind average at the end of the month. The wheat crop progressed well in November and was in good condition by November 30. Livestock ended the month in good condition.

DECEMBER

December had normal seasonal temperatures but rainfall was below normal. Average temperature for the month was down from the normal by only .3 degree at 47.1 degrees. Extreme highs ranged from the mid 60s in the mountains to the mid 70s in central Georgia to the low 80s in south Georgia. Rainfall during the month averaged 1.43 inches which was 2.76 inches below normal and ranked December as the driest month of the year. Weather conditions allowed the completion of most late season row crop harvest. Adequate soil moisture levels at the beginning of the month, along with five or more days suitable for fieldwork, enabled farmers to complete seeding of small grains and winter pastures. Most of the 1988 crops were harvested by the third week of December with the exception of pecans which were still 10 percentage points from completion. Livestock and poultry remained in good condition throughout the month.

1/ Prior to 1975, defined as pieces of 10 acres or more that had annual sales of agricultural products of \$50 or more and pieces of less than 10 acres that had annual sales of \$250 or more. Beginning with 1975, a farm is a place as of June 1, that sells or could sell \$1,000 of agricultural products during the year. 2/ Not available prior to 1965. 3/ As of March 1, 1962-1975; changed to February 1, 1976-1981; April 1, 1982-1985; February 1, 1986-1989. Average value includes land and buildings.

1/ The southeast includes GA, AL, and SC. 2/ Excludes agricultural service workers. 3/ Family members who worked 15 hours or more. 4/ Classification includes bookkeepers, pilots, etc.
5/ Insufficient data, included in all hired wage rates.

ESTIMATES ISSUED BY GEORGIA AGRICULTURAL STATISTICS SERVICE

Current estimates of many data items included in this publication are available from the Georgia Agricultural Statistics Service, at various times throughout the year. The table below indicates the months data are available. Current data may be obtained by calling the Georgia Agricultural Statistics Service or interested persons may be added to one or more of our five mailing lists. The five separate mailing lists are: (1) Weekly Weather and Crops, (2) Weekly Broiler Report, (3) Georgia Agricultural Facts, (4) Georgia Poultry Facts, and (5) Georgia Farm Report, a semi-monthly publication containing various crop, livestock, price and other farm data. The annual charge for these publications is: Weekly Weather and Crops, \$12; Weekly Broiler Report, \$15; Georgia Agricultural Facts, \$5; Georgia Poultry Facts, \$5; and Georgia Farm Report, \$10. Reports are available free of charge to farmers and agribusiness firms who provide the basic data on which reports are based. Within availability constraints, a copy of the Georgia Agricultural Facts and Poultry Facts is available to Georgia residents without charge. An order form may be obtained by calling (404)546-2236 or writing the Georgia Agricultural Statistics Service, Stephens Federal Building, Suite 320, Athens, Georgia 30613.
